SUMMARY

Full-stack .NET engineer. I build and support the C# APIs, SQL Server databases, and CI/CD behind an industrial distributor's order-entry platform, now being migrated onto Dynamics 365.

SKILLS

Languages: C#, SQL, TypeScript, JavaScript, PowerShell, Python, Bash, Java, HTML/CSS

Frameworks & Libraries: .NET (ASP.NET, MVC, Blazor, MAUI, EF, MVVM), Spring Boot, React.js, Node.js, Tailwind CSS, Bootstrap

Cloud & Tooling: Azure DevOps, Azure Key Vault, Application Insights, IIS, SQL Server, Swagger/OpenAPI

Practices: Microservice & BFF architecture, REST API design, CI/CD pipelines, OIDC authentication, unit & functional testing, production support

EXPERIENCE

Kimball Midwest

Columbus, OH

Software Engineer

Feb 2026 – Present

- Rewrote the ten-year-old .NET Framework service behind 80% of company order entry onto modern .NET, adding OIDC authentication, Application Insights logging, and its first unit and functional test coverage in MSTest.
- Building SalesHierarchyAdmin.UI, the company's first Blazor Server app, and designing the shared MudBlazor component library intended as the foundation for our future front ends.
- Stood up dev and UAT environments for the Dynamics 365 migration of MSTARs, our order-entry platform: SQL Server instances, pipelines, hosts, and firewall rules, coordinating DBAs, DevSecOps, and integration partner VelSol.
- Pushed the team to fork at the branch level rather than duplicate controllers for the migration. The partner data syncs had no end-to-end coverage, so redeploying to a separate host carried less risk. That approach shipped.
- Led the .NET 8-to-10 upgrade: moved shared libraries onto stable package references and wrote up the steps the remaining ~84 applications now follow.
- Fixed the Telerik licensing and NuGet auth failures breaking Managers App builds, then took ownership of its CI/CD and release process.
- Review teammates' pull requests and talk through the reasoning behind the patterns we use.

Associate Software Engineer

Jun 2024 – Feb 2026

- Built and owned a backend-for-frontend service aggregating ~15 downstream microservices behind one API for a manager-facing reporting app used by 200+ people.
- Refactored the vendor-built Managers App to MVVM and shipped the Field Visit Reports and Business Reviews modules, replacing an Excel, Microsoft Forms, and PowerApps workaround.
- Ran the app's iOS and Android store releases and wrote the runbook the team uses.
- Carried production support for order entry, tracing failures through SQL logs and stabilizing the deployment pipeline.

Help Desk Agent, Tier 1

Mar 2023 – Jun 2024

- Automated repetitive IT and mobile-app tickets with PowerShell and queried ticket data in SQL to surface recurring failures.

EDUCATION & CERTIFICATIONS

B.S. Computer Science, Franklin University (2023)

A.S. Software Development, Columbus State (2020)

Microsoft Certified: Azure Fundamentals (AZ-900) — 2024

CompTIA IT Fundamentals+ — 2024
